

Physiotherapy for babies at Pinarc

Pinarc Melton is currently accepting new referrals for babies aged 0-2 for physiotherapy services with no waitlist.

Our physiotherapists have a special interest in the physical development of babies aged 0-2 and have completed additional training in baby development, specialised equipment and therapeutic interventions.

How we can help:

- We can assist with the development of early gross motor skills such as rolling, sitting, crawling, standing and walking.
- Where required we can prescribe specialised equipment to assist your baby with their development and access within the community. For example, we can prescribe specialised seats, strollers, standing frames, walking frames and early powered mobility.
- We can assist children with the development of strength and balance through play.
- We can provide intensive blocks of therapy to target specific gross motor skills. We can also complete Constraint Induced Movement Therapy and Bimanual Therapy interventions should your child be eligible for this.

Our physiotherapists are available Monday to Friday. We can provide therapy in the home, at our clinic and out in the community.

How Much Does it Cost?

We charge the standard NDIS rate for physiotherapy of \$183.99 an hour.

How do I register:

You can refer your child using the QR code below or visit our website and click the refer now button on our home page.
